CERTIFICATIONS

- Advanced Web Development Certification
- Full Stack Development Professional Certification
- MongoDB Certified Developer

PROJECTS

MakeOver Solutions App

I worked on a project called Makeover Solution – App, where I was responsible for both front-end and back-end development, and I developed a fully functional admin dashboard using React, and handled back-end development with Node.js and Firebase. My role also involved designing and implementing RESTful APIs for the mobile application, as well as creating various utility functions to enhance the overall functionality and performance of the system.

Avantika Vacations

<https://avantikavacations.com/>

I developed a website called Avantika Vacation, designed to help travel business owners easily manage their trip plans and streamline their operations. The platform allows owners to efficiently handle trip planning, agent management, and payment tracking. I also built a comprehensive dashboard, enabling centralized control of the entire website through this dashboard. The admin can dynamically manage all content, users, and operations from a single interface.

MakeOver Solutions

<https://www.makeoversolution.in/>

I developed the official website for Makeover Solution, a company specializing in beauty and personal care services. The website was designed to reflect the brand's identity while offering a user-friendly experience for potential clients. It includes features such as service listings, booking options, and company information, all presented in a clean and modern layout. The goal was to create a professional online presence that builds trust and makes it easy for users to explore and connect with the business.
